Refrigerator Temperature Log

INSTRUCTIONS: Whenever program staff/volunteers are on site, at least weekly, record the temperature of the refrigerator as indicated by the thermometer inside on the shelf and/or the reading from the digital infrared device. The temperature should **be between 33° - 40° degrees F**. If there is a slight variance, please recheck after 10 minutes. If there is one, adjust the thermostat in the unit up/down and recheck the temperature in an hour. If the temperature continues to be out of acceptable range, please move items to another refrigerator and repair or replace the unit.
